In the claims:

Cancel claims 2 and 6 without prejudice.

Amend claim 1 as follows:

1. Electromechanical drive element for the exact positioning of an object in the centimeter range, comprising a rotor (11) supported in a bearing element and at least one plezoelectric element (18) that can be acted upon with an electrical voltage, wherein the bearing element (12, 13, 14) comprises at least one rotor receptacle (16) supported on a bearing block (15) in a fashion that allows it to be rotated within limits, wherein said rotor receptacle (16) can be rotated by the expansion and/or contraction induced by an electric voltage - of the at least one plezoelectric element (18), wherein the rotor (11Z) is supported in the at least one rotor receptacle (16) in a fashion that allows it to be rotated with friction, and wherein the friction between the rotor (11) and the at least one rotor receptacle (16) is such that the rotor (11) does not follow relatively rapid revolutions of the at least one rotor receptacle (16), but follows relatively slow revolutions of the at least one rotor receptacle (16), wherein the rotor (11) is supported in the at least one rotor receptacle (16) in a fashion that allows it to be rotated with friction, and

wherein the friction between the rotor (11) and the at least one rotor receptacle (16) is such that the rotor (11) does not follow relatively rapid revolutions of the at least one rotor receptacle (16), but follows relatively slow revolutions of the at least one rotor receptacle (16).
